

PAPERCRAFT DRAGON CRYSTAL

Every "line"
is for folding

Is best if you mark it with a cutter,
and then fold it to both sides.
Test the place of the flaps
before gluing them.

Crystal Dragon

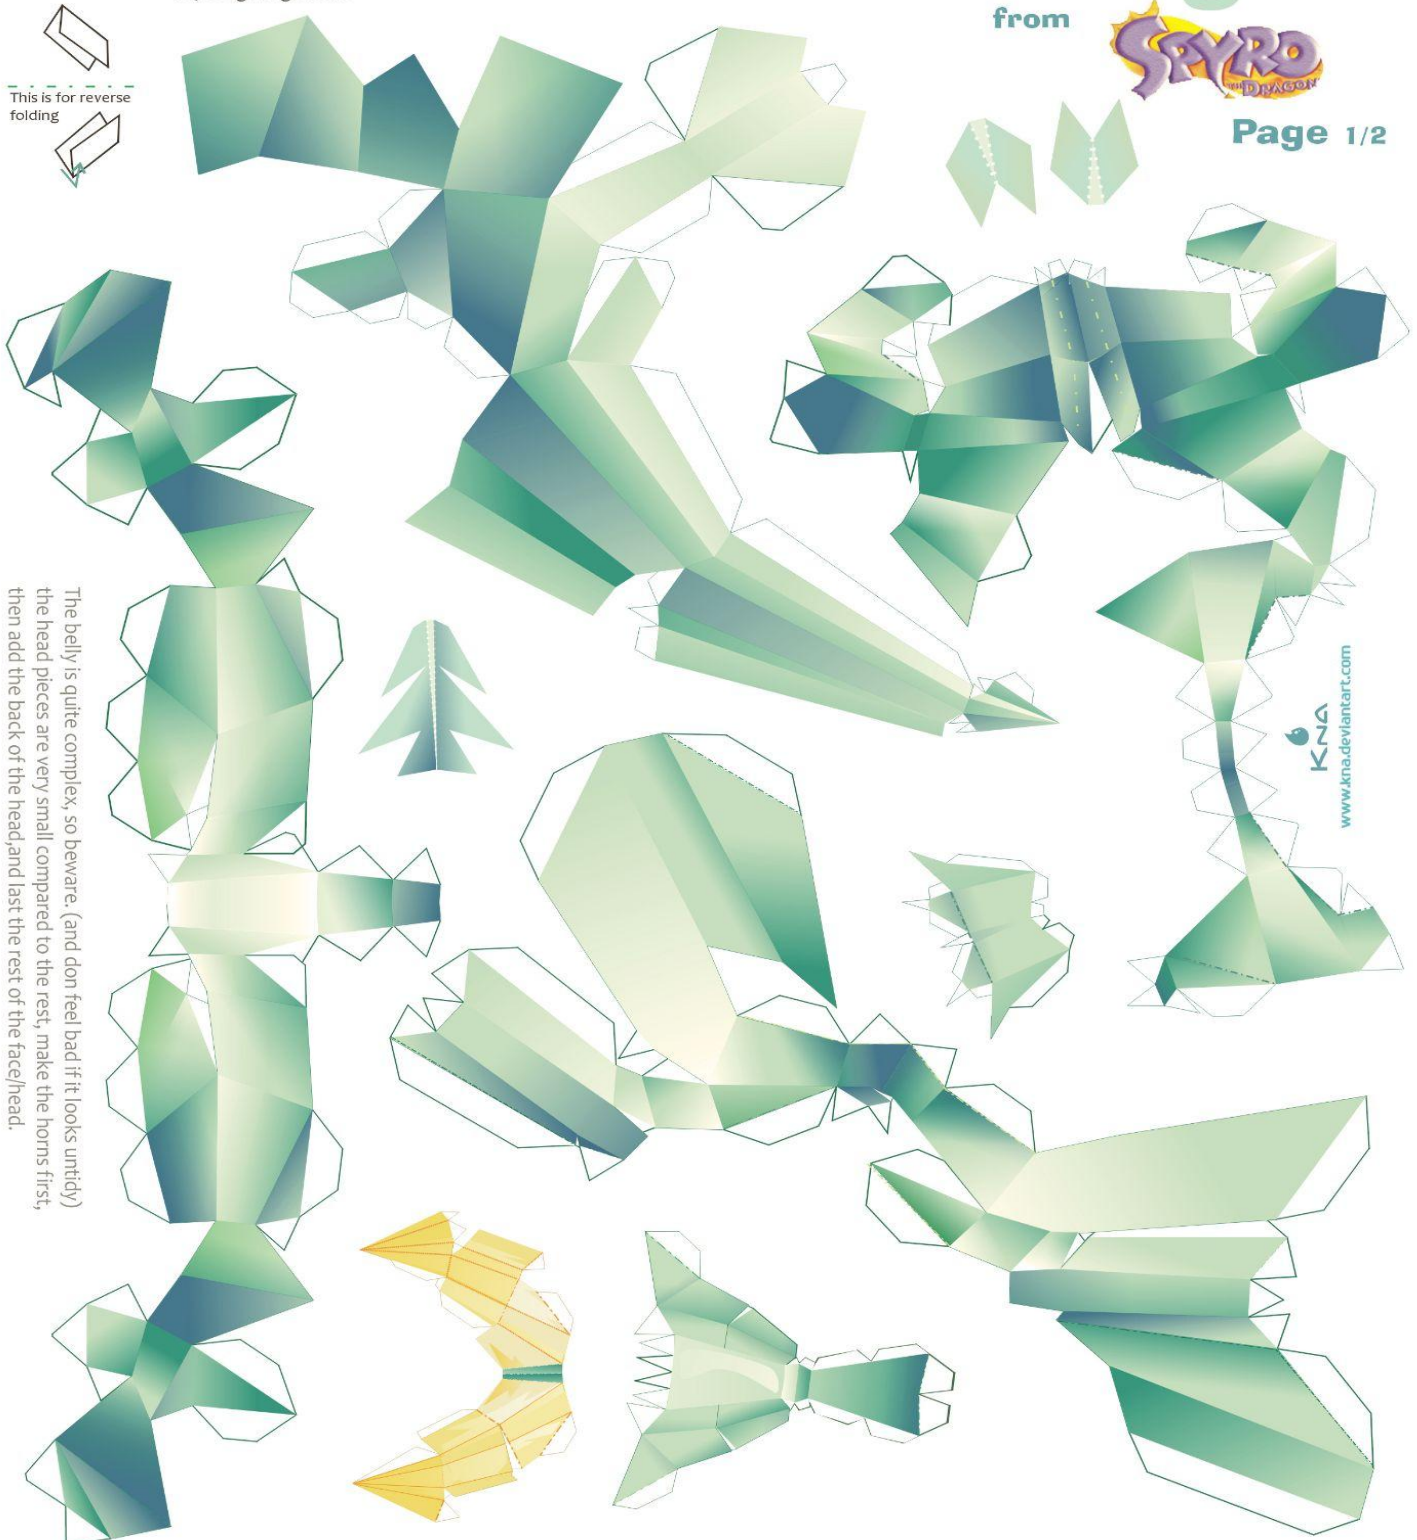

from

Page 1/2

This is for reverse
folding

The belly is quite complex, so beware. (and don't feel bad if it looks untidy)
the head pieces are very small compared to the rest, make the horns first,
then add the back of the head, and last the rest of the face/head.

Spyro Logo and the "character" Crystal Dragon are © Insomniac
The 3d model that was used to design this pattern was made by me(Kna),(its fan art)
so it may be a bit different to the ingame model. (My references/skills were not that good)
you may redistribute this *as long as you do not earn money or edit it in any form.*

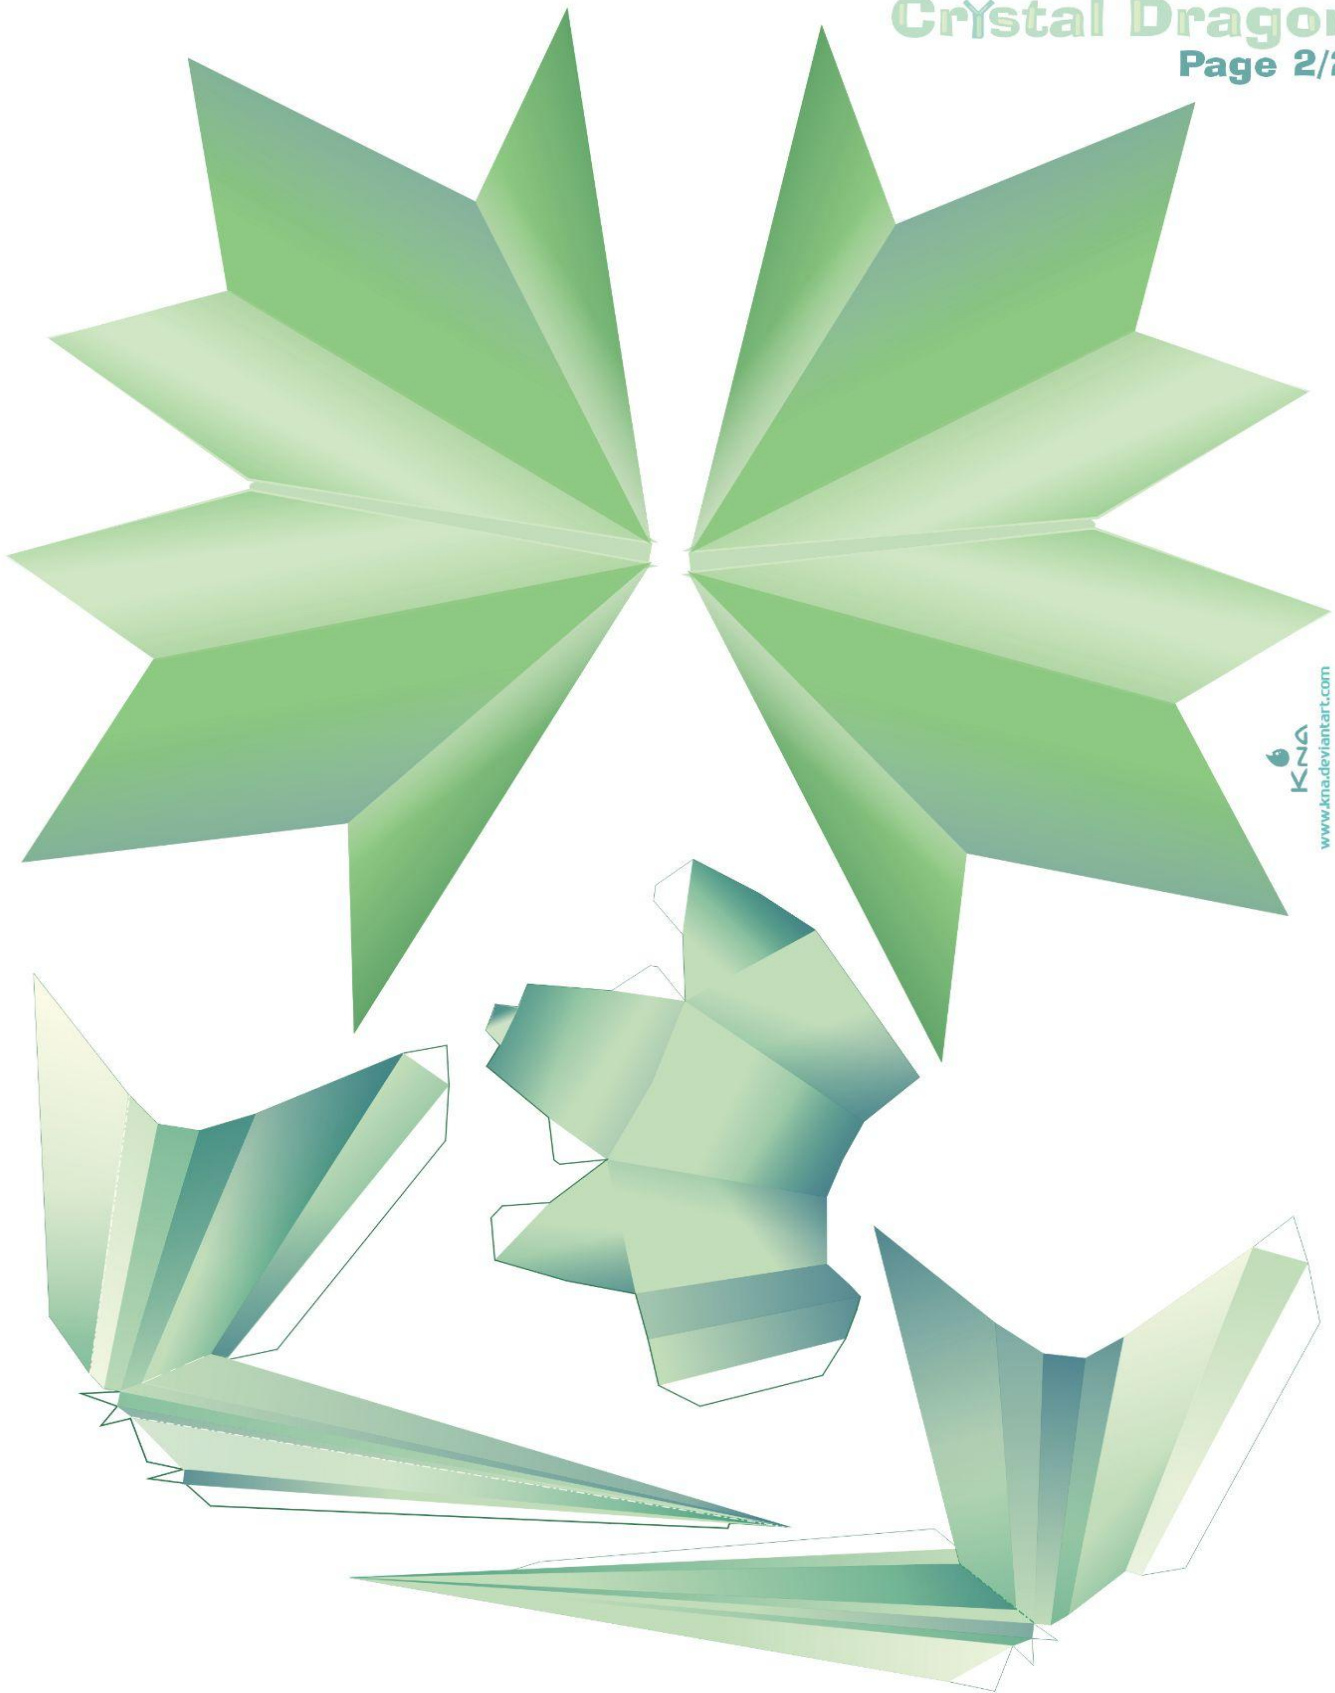

CRYSTAL DRAGON BASE (ARTISANS)

The 3d model that was used to design this pattern was made by me(fits fan art). So it may be unintentionally different to the ingame prop.
(I took liberties with the design as the ingame model was very pixelated)
You may redistribute this as long as you do not earn money or edit it in any form
If you are interested in a base from another of the main worlds please send me TOP VIEW reference screenshot from the game at a proper quality

Start the tail from the smallest part to the biggest one. Then add the tail to the back legs then the wings/body piece then add the head to the neck(add the crest now),then the front legs to the low part of the neck. then attach both sides together, the last thing you should add is the upper part and the insides of the wings, end it by pasting the scales to the sides of the face.
